Envision AESC launches its new UK battery gigafactory

SOCIALS

Envision AESC has launched its new UK electric vehicle battery gigafactory in Sunderland.

Production is now officially underway at Envision AESC's new 15.8 GWh plant that will manufacture lithium-Ion batteries for electric vehicles made in the UK and support the launch of the new Nissan LEAF.

It is the culmination of over a decade's experience building British made EV batteries for the UK car industry.

At the heart of Envision AESC's operation will be the largest clean room in the UK, where the company's cutting-edge battery cells are manufactured to the highest quality standards. Conditions in the clean room are equivalent standard to a hospital operating room.

Envision AESC's UK workforce will rise to around 1,000 once the plant is fully operational - a fourfold

increase since Envision AESC established its current operation at the Sunderland site in 2019, with the company investing over a billion pounds in the UK during that time.

Envision AESC UK Plant Director Jim Marley said: "The launch of our new UK electric vehicle battery gigafactory represents a significant leap in battery technology. It will power the new Nissan LEAF and drive the electrification of the British car industry to a new level. Our original gigafactory was the first in Europe and the Plant 2 will anchor a resilient, globally competitive EV supply chain for the UK. "

Anyone interested in the green jobs available at the new gigafactory should visit www.gigajobs.aesc.co.uk to find out more and to apply.

Earlier this year Envision AESC helped launch the National Battery Academy at New College Durham and Newcastle University that will help drive up skills and train the new EV battery manufacturing workforce in the region.

Envision AESC UK OVERVIEW

Since our founding in Japan in 2007, Envision AESC has been at the forefront of battery innovation, driving the global transition to zero-emission mobility and sustainable energy solutions.

Our advanced technologies power over one million electric vehicles and support energy storage solutions in more than 60 countries. As the trusted partner for leading automotive manufacturers and energy providers across North America, Europe, and Asia, Envision AESC continues to shape a cleaner, more connected future through innovation, reliability, and a steadfast commitment to sustainability.
